

Node.js + PostgreSQL Task

Create the Node.js (Express) API:

1. /users POST - create user with the next fields: first_name (required, only letters), last_name (only letters), email (required, unique, correct format), phone (correct format), password (hash)
2. /login POST - create API for user login by email and password. Use JWT authentication
3. /users/:id GET - get 1 user by id.
4. /users/:id PUT - update user, add validation. Connect Socket.IO for sending push notifications after user update.

Good luck! We are waiting for your result here: sofiya.rozputnya@incorainc.com
